

# See the difference in your pigs and the improvement in your profits

Maintaining healthy, productive pigs is now more challenging than ever, especially when complicated by the presence of viral agents such as PRRSV and PCV-2.

To produce healthy pigs requires products you can trust to treat and control complex, costly respiratory and enteric diseases like PRDC and the opportunistic infections associated with PMWS.

Products that work fast, even against tylosin and lincomycin resistant strains, to deliver maximum pig performance.

Products like Denagard from Novartis.

The proven efficacy of Denagard against single and mixed infections caused by *Mycoplasma* spp, APP, *Brachyspira* spp and *Lawsonia intracellularis*, remains undiminished.

So choose from a full range of formulations and see the difference in your pigs, and your profits.

**Treats and controls: Mixed infections • Mycoplasma • APP • PRDC • Ileitis • Colitis • Swine dysentery • PMWS associated infections**
